SUMMARY

Frontend developer with 3+ years of professional React and TypeScript experience, including two years building an integrated ERP of about 80 pages. Focused on reusable architecture for data-heavy enterprise systems, including a factory-based page system, shared tables and forms, and request workflows. Experienced in ASP.NET Core and SQL Server backends, Docker deployment, and AI-assisted development.

SKILLS

Frontend: React, TypeScript, JavaScript, Next.js, TanStack Query, TanStack Router, React Router, Zustand, React Hook Form, Zod, Tailwind CSS, Vite

UI engineering: data-heavy tables and forms, component architecture, RTL / Persian UI, responsive design

Backend (supporting): .NET Core, EF Core, Node.js, Express, SQL Server, PostgreSQL, REST APIs

Tools: Git, Docker, Nginx, CDN, Azure, Stimulsoft Reports

AI-assisted development: Claude Code, Codex, custom agent skills, MCP

EXPERIENCE

Frontend Developer, Pump Turbine Co. (Petco) Aug 2024 – Present

Tabriz, Iran · Full-time · Integrated ERP for a pump and turbine manufacturer (frontend and part of the backend)

- Designed and built PageShell, a factory-based page system that removes repeated component wiring and CRUD logic across modules, cutting code size by 60%. It supports plugins such as file upload, digital signature and reporting, plus nested pages with parent context.
- Designed and built the shared data-table system in client-side and server-side versions: server-side paging, sorting and filtering, multi-condition search, per-table persisted state, bulk actions, permission-aware actions and a responsive mobile card view.
- Built a multi-tab workspace on React Router with temporary and pinned tabs, tab reordering and state that survives reloads, so users can work on several records at once.
- Implemented the workflow system: approval inbox (cartable), signatures, revisions, request rejection and reset to the first step, with transactions handled at each step.
- Codified the ERP's frontend and backend architecture as agent skills and docs, so modules built with Codex and Claude Code follow its conventions.

Frontend Developer, LoveCode (web agency) Apr 2023 – Sep 2024

Remote · Contract · Client work, mostly under NDA

- Turned the agency's designs into responsive React + TypeScript frontends for client websites and web apps.
- Integrated client REST APIs and payment gateways, including loading, empty and error states.

PROJECTS

TidySense: AI-assisted personal planner tidysense.ir · GitHub

React 19, TypeScript, TanStack Router & Query, Zustand, React Hook Form, Zod, .NET 10, PostgreSQL

- Persian planner where AI drafts a week of tasks and routines from a goal; the user reviews the draft before anything is saved. Today view, task dependencies, routines and phone OTP login.

NeoVault: self-hosted knowledge workspace neovault.ir · GitHub

Next.js 16, TypeScript, TanStack Query, Express, TypeORM, PostgreSQL, Docker, PWA

- Links, notes, snippets and API requests in nested collections; trigram-indexed search, offline PWA with queued sync, deployed with Docker Compose and Nginx.

AranazShop: Persian e-commerce storefront and admin aranazshop.ir · GitHub

Next.js 16, TypeScript, Supabase (PostgreSQL), TanStack Query, Zustand, React Hook Form, Zod

- Storefront with product variants, search and filtering, cart, checkout and order tracking; OTP login, role-based admin and inventory management.

EDUCATION & LANGUAGES

B.Sc. Computer Engineering, Islamic Azad University, Tabriz 2023 – expected 2028

Persian (native) · English (B2–C1, professional working proficiency) · Military service completed
