</> Technical Skills

Core Front-End Skills

React.js Next.js
TypeScript Tailwind CSS
TanStack Query Zustand
React Hook Form
React Router

Front-End UI & Architecture

Vite Axios
Data-Intensive UI
Reusable Architecture
RTL Support Responsive UI

Backend & DevOps (Basic)

Node.js Express Docker
Docker Compose
SQL Server PostgreSQL
REST APIs

Tools

Git / GitHub Azure
Basic CI/CD
Stimulsoft Report

Education

B.Sc. in Computer Engineering

Islamic Azad University,
Tabriz | 2023 – Present

GPA: 16/20. Focus on
Software Engineering & Web
Development.

Professional Summary

Front-end developer with more than three years of experience building web products, including around two years working on a large, multi-module enterprise ERP. Focused on React and TypeScript, reusable architecture, data-intensive interfaces, complex forms and tables, and state and query management; experienced in turning business workflows into maintainable, extensible user interfaces.

Professional Experience

Front-End Developer

August 2024 – Present

Petco · Tabriz

- Developed the front end of a multi-module enterprise ERP with React and TypeScript, including data-intensive pages, multi-step workflows, and shared infrastructure used across different areas of the system.
- Designed and evolved a typed, metadata-driven PageShell architecture for reusable composition of tables, forms, actions, and page policies, with nested-resource support and opt-in capabilities.
- Developed shared table and form infrastructure for client and server modes, filtering, sorting, pagination, selection, permission-aware actions, dynamic fields, and async/cascade selects.
- Moved hierarchical resources from deeply nested modals to parent-aware routed pages and integrated them with a multi-tab workspace, breadcrumbs, and table state.
- Implemented the front-end interface for a revision-based engineering workflow, separating the current Edition from history and presenting Added, Removed, and Modified changes across later revisions.
- Integrated contextual file and reporting capabilities with ERP records and connected the front end to existing .NET and SQL Server APIs, with RTL and responsive UI support.

Front-End Engineering Focus in ERP

PageShell Architecture Data-Intensive UI Server / Client Tables
Routed Workspaces Nested Resources Dynamic Forms Workflow UI
File / Report Integration RTL Enterprise UI

Front-End Developer

April 2023 – July 2024

LoveCode · Remote

- Built responsive web apps using React, TypeScript, Redux, and Tailwind CSS.
- Delivered clean, maintainable code & collaborated with designers/backend teams.

- Converted UI/UX designs into production-ready pixel-perfect interfaces.

★ Featured Projects

NeoVault – Personal Knowledge Vault

[GitHub](#) [neovault.ir](#)

Next.js React TypeScript Tailwind CSS TanStack Query CodeMirror Express TypeORM PostgreSQL Docker PWA JWT

- Developed a self-hosted full-stack application for organizing links, notes, code snippets, API requests, and personal knowledge in one workspace.
- Implemented PostgreSQL full-text search, hierarchical categories, bulk operations, and JWT/refresh-token authentication.
- Added client-side encryption, offline PWA support, a synchronization queue, and containerized deployment with Docker Compose and Nginx.

NaziShop – Persian E-Commerce Platform

[GitHub](#) [thenazishop.ir](#)

Next.js TypeScript Tailwind CSS TanStack Query Zustand React Hook Form Zod Express TypeORM PostgreSQL Docker

- Developed a Persian full-stack store with product variants, search and filtering, shopping cart, and order submission and tracking flows.
- Implemented OTP login, role-based access, and an administration panel for products, orders, and inventory with Express, TypeORM, and PostgreSQL.
- Designed an RTL, responsive interface with dark mode and guest/user cart state management.

Portfolio Website

[mahdidelavar.ir](#)

Next.js 15 React 19 TypeScript Tailwind CSS 4 Drizzle ORM PostgreSQL

- Developed a personal portfolio with Next.js App Router, responsive dark UI, technical SEO, metadata, and sitemap support.
- Built Persian and English engineering article sections for in-depth case studies on front-end architecture, ERP work, and real technical decisions.
- Built interactive JavaScript and React challenges with categories, filtering, answer submission, saved progress, and a leaderboard.

FrontForge – Front-End Decision Engine

[GitHub](#)

Next.js TypeScript Tailwind CSS Zustand JSZip Static Export

- Built a client-side wizard for documenting front-end architecture decisions, from framework and folder structure to design tokens and testing standards.
- Implemented selection-conflict detection, live design-system previews, and ZIP output for starting new projects.
